

The Power of Connection: Strengthening Community Outreach Through IT Transformation

Background

A cornerstone of the local community, a flagship church in the St. Louis area with over 3,000 members had long been a hub for outreach efforts, hosting events, and supporting local and overseas volunteering initiatives. But, as the church grew, its IT infrastructure began to strain under the increasing demands of modern operations. Previously relying on a single IT resource, they faced security vulnerabilities, operational inefficiencies, and an increasingly restricted capacity to manage their expanding needs.

Challenge

The church's existing systems were struggling to keep up with their mission. Lacking enterprise-level security and the knowledge to maintain it, they were left exposed to cyber threats, putting sensitive member data—including financial information—at risk.

Without developer support, their open-source CMS was hindering event registrations and volunteer management, causing frustration and a loss of trust among current and prospective members.

And, with no formal project management or IT structure, priorities were driven by immediate needs, leading to ignored issues and inefficiencies that snowballed into serious problems.

The turning point came when a member of Anderson Technologies' team (also a member of the church) recognized their challenges and offered a solution. This personal connection created a foundation of trust; the church knew that with us, their goal of continued community service was in safe hands.

We approached the partnership with a focus on listening and understanding the church's unique needs—which, as it turns out, weren't so far removed from those of many of the small businesses we work with.

1. Comprehensive IT Audit

Anderson conducted a detailed assessment, uncovering hidden vulnerabilities and inefficiencies. This included a review of their CMS, cloud infrastructure, and security measures.

2. Enterprise-Grade Security Implementation

The team addressed critical security gaps by implementing comprehensive defenses, ensuring compliance with financial and data protection standards without getting in the way of the church's workflows.

3. Cloud-Based Solutions and Support Structure

We migrated the church to a supported cloud-based platform, streamlining operations and enabling straightforward event and volunteer management. Additionally, the access to our team of experts relieved the church's previous limited resources.

4. Project Management and vCIO Services

By establishing clear milestones and timelines, we transformed the church's approach to IT from chaotic to controlled. Leadership now had a roadmap for improvements, with input from other departments to ensure practical and effective solutions that worked for everyone.

The Partnership Included:

Proactive IT Guidance: Anderson Technologies acted as a virtual Chief Information Officer (vCIO—yes, even churches need one!), helping the church set technical priorities and align IT solutions with their goals.

Training and Education: Staff and volunteers were provided with training to effectively use new systems, ensuring smooth transitions and improved productivity.

Tailored Solutions: The outdated open-source CMS was replaced with a more user-friendly platform to remove stress from community engagement.

Scalable IT Infrastructure: Solutions were designed with scalability in mind, preparing the church for future growth without the need for frequent system overhauls.

Holistic Feedback Loop: Anderson worked closely with leadership and individual departments to gather input, ensuring that implemented solutions addressed real-world challenges and daily operational needs—which had previously been a real sticking point.

“Anderson Technologies has been a tremendous company to work with. As a multi-staff church with thousands of members that operates every day of the week, we have a variety of IT needs. Anderson Technologies has a team of specialists that have been able to service all our needs in a timely fashion. They bring a great measure of servant-heartedness and patience, along with expertise to all of the tasks we have had them help us with. I cannot recommend them enough.”

Results:

The transformation was immediate and impactful.

Key wins included:

Enhanced Security and Trust: Members' data is now safeguarded, reinforcing trust within the community.

Streamlined Operations: Staff and volunteers can manage events and outreach efforts effortlessly, removing roadblocks to their mission.

Responsive Support: With a dedicated IT team and vCIO, the church experiences rapid issue resolution, and finally gets to experience the kind of unwavering support they provide to their members first-hand.

Cost Savings: Leveraging vendor partnerships, Anderson reduced costs on essential tools like Microsoft 365, allowing the church to reinvest in its community programs.

Outcome:

By empowering this large St. Louis-area church with modern IT, we've helped amplify their outreach efforts. The church can now focus on what matters most: serving their community (and beyond). And to think, they didn't even know this kind of functionality was possible for them! They've since let us know that having a reliable IT partner is “like night and day” compared to their previous experience – praise that we're particularly proud of.
